

QUARK BRASS

LOW TABLE

Quark Brass can be customized in different types of finishes in sleek and textured surfaces.

FINISH APPLICATION

Any finish can be applied to both the tabletop and the body. The two surfaces can be treated the same way or in different finishes, to create a particular contrast.

IMPORTANT NOTICE

Brass is a live alloy of metals and will tarnish over time if it's not protected with a varnish layer. Varnish can be applied in any kind of finish, protecting the alloy from oxidation and facilitating maintenance.

We use a glossy nanoceramic varnish on Sleek Mirrored (A) surfaces, and a matt one for every other. This modern varnishing method assures perfect adhearance to the piece and a very hard and resistant final surface.
